PROBLEM: The radar splash does not show on OpenCPN 3.3.1303 with GRadar 1.3 Plugin under Windows 7.

CAUSE: Windows 7 sees the Radar Scanner as an Unidentified Network and defaults it to a "Public" network. We cannot change the network to "Home" or "Private" as there is no link (like the blue link you see for Home network below). The Windows Firewall is blocking inbound connections for "Public" networks. I created two inbound rules on the Firewall, one for the OpenCPN program, and another for UDP on all Local and Remote ports. The Radar splash still did not display.
